6.	Course publications and materials	4
7.	Construction site drawings, tasks and projects	5
8.	Learning outcomes	5
9.	Assessment	8
10.	Trainer requirements	9

1. Introduction

The *Site management safety training scheme* (SMSTS) is a five-day course designed for site managers, or aspiring site managers. It is designed for those with responsibility for managing, monitoring, implementing and reporting in a construction environment.

The course covers relevant health, safety and environmental legislation affecting safe working in the building, construction and civil engineering industries. It highlights the need for risk assessment in the workplace, the implementation of the necessary control measures, and adequate communication to sustain a health and safety culture among the workforce.

The SMSTS course is endorsed by Build UK as the standard training for all construction managers.

2. Aims

The course aims to help site managers to:

- manage and implement health, safety and environmental aspects on site, in accordance with current legal provisions and within the context of their management role
- implement new guidance and industry best practice
- develop an understanding of responsibility and accountability for site health, safety, welfare and the environment
- recognise that a safe site is efficient, economical, productive and environmentally friendly.

3. Entry requirements

There are no formal entry requirements, however, delegates should hold, or be about to hold, the role of a site manager. Previous health and safety knowledge is recommended. Those without previous health and safety management experience are recommended to sit the two-day SSSTS course. Delegates must be competent in written and spoken English necessary for operating efficiently at site management level.

4. Delegate numbers

The minimum and maximum number of delegates per course is 4 and 20 respectively. The minimum and maximum delegate numbers are not subject to an appeal.

5. Course duration and attendance

5.1. Duration

This is a five-day course. Delegates are required to complete the full course (37.5 hours) to be eligible for certification.

It is highly recommended that this course runs consecutively over five days to maintain continuity and flow. However, day release is an option, based on one or two days per week, up to a maximum of five weeks. Where courses are interrupted by Bank Holidays, this time period may be extended to seven weeks. It is important that continuity of training is maintained on this intensive course.

Should a training provider wish to deliver the course over half days or as an evening course, the required contact hours are 40 and 42 hours respectively. The extended hours reflect the start-stop nature of the delivery. Half-day courses will require attendance for a minimum of four hours and evening classes for a minimum of three and a half hours at any one time.

5.2. Attendance

Delegates are required to attend all sessions in accordance with the course programme (regardless of the delivery method undertaken) to achieve the necessary learning objectives to qualify for the certificate. If this is not possible, the delegate must enrol on a new course and retake the full five-day course. Refer to the *Quality assurance requirements* for information on what to do in extenuating circumstances.

6. Course publications and materials

6.1. Publications

At the start of each course the training provider must provide each delegate with their own copy of the mandatory publications, which will be retained by the delegate upon completion of the course.

<i>Construction site management delegate workbook (XA6)</i>	Mandatory
<i>Construction site safety – The comprehensive guide (GE700)</i>	Mandatory

6.2. Supporting materials

Scheme of work	Mandatory
Construction site drawings	Mandatory
Trainer reference (XA6T)	Mandatory
<i>What do you know?</i> practice paper	Optional
Safety signs	Optional
Core exercise delegate templates	Optional
COSHH assessment template	Optional
Risk assessment template	Optional
Short film example discussion points	Optional
Mental health and stress in the workplace (PowerPoint)	Optional
<i>What do you know?</i> (Mental health and stress)	Optional
Focus area InfoBites (PowerPoint)	Optional
<i>Are you stressed?</i> questionnaire	Optional
Lesson plan template (blank)	Optional
Trainer review matrix	Optional
Companion website	Optional

- A *Scheme of work* document is available to each training provider. This details the learning outcomes, assessment criteria, notes for guidance, reference and support materials available for the course. **It is mandatory for the document to be used to assist with lesson planning so that all learning outcomes are met in the delivery of the course.**
- Training providers may use the supporting materials provided for the full SMSTS course with full flexibility according to the delegates' needs.
- CITB supporting materials, including a blank lesson plan template, are available online at the CITB secure area.
- Training providers can also use additional support materials to meet the delegates' needs, provided that the aims and learning outcomes of the course are met.

7. Construction site drawings, tasks and projects

The construction site drawings, tasks and projects are designed to be used as reference material for the core exercises and have been designed to offer a high level of flexibility in delivery. The completion of the four core exercises enables the trainer to assess the performance and interaction of each participant within the group.

The *Trainer reference* (XA6T) fully describes how the core exercises should be approached and the support material available to facilitate their completion effectively and efficiently. It provides information and examples on how the construction site drawings, tasks and projects may also be used to support the core exercises or any other element of the *Scheme of work*. It also outlines where and how flexibility is encouraged to meet the learners' needs.

8. Learning outcomes

Delegates taking the SMSTS course should be able to achieve all the learning outcomes listed below by the end of the course.

Module 1 – Legal and management

1. Health and safety law

Describe the purpose of health, safety and environment legislation and the different legislative requirements that must be followed.

2. The Health and Safety at Work etc. Act

Describe the legal duties of the employer, self-employed and, to a lesser extent, employee, to promote health and safety awareness and effective standards of safety management by every employer.

3. Construction (Design and Management) (CDM) Regulations

Describe the CDM Regulations that cover the management of health, safety and welfare on construction projects. Identify what they are about, what they require, what needs to be done and by whom.

4. Health and safety management systems

Describe the key principles of a health and safety management system, what it should contain and how it should be used.

5. Risk assessments and method statements

Describe the importance of risk assessments in ensuring a reduction in workplace accidents.

6. Induction and training

Describe the legal requirements for the provision of information and ensure it is tailored for the audience, understood by the audience and specific to the site.

7. Effective communication

Describe the importance of good communication on site with all employees, particularly during site induction, and ensuring critical information is conveyed.

8. Leadership and worker engagement

Describe the principles of leadership and worker engagement to influence good working practices on site.

9. Inspection and audit

Describe the importance of accurately measuring, monitoring and reporting on health and safety within the workplace.

10. Statutory forms, notices and registers

Identify the statutory and non-statutory forms, notices, signs and registers used in the building and construction industry and the keeping of records and other details.

11. Accident prevention, control, reporting and investigation

Describe why accidents happen, the human factors, trends, causes, impacts and preventative measures required, including reporting and follow through.

Module 2 – Health and welfare

1. Management of health

Describe the importance of sustaining good health in the workforce and how to plan and maintain suitable practices to prevent the high costs that work-related ill health causes.

2. Welfare facilities

Describe the importance of providing suitable welfare facilities and ensuring they comply with the CDM Regulations.

3. Stress and mental health at work

Describe the importance of a positive approach to managing mental health issues and reducing the costs to industry.

4. Drugs and alcohol

Identify, manage and support individuals affected by drugs and alcohol and understand the legal framework that regulates it.

5. Control of substances hazardous to health

Describe the importance of protecting the workforce from exposure to hazardous substances.

6. Lead

Describe the implications of lead in buildings, its effect, management and control.

7. Asbestos

Describe the risks asbestos poses to health, and the legal requirements required to manage that risk.

8. Dust and fumes

Describe the risks posed by inhalation of airborne particles, the control measures used and how to protect the workforce, the public and the environment.

9. Noise

Describe the risks that excess noise can place on the employee and the surrounding area, and how to mitigate and manage that risk.

10. Vibration

Describe the harmful effects of excessive vibration and how these may be mitigated.

11. Manual handling

Describe how to reduce the risk of injury within the workforce, taking into account the task, environment and control measures.

Module 3 – General safety

1. Site organisation

Describe the requirements to be considered when setting out a construction site.

2. Fire prevention and control, and dangerous substances

Define correct fire planning and dangerous substance control, including safe handling and storage. Ensure procedures are in place to manage hazards and risks.

3. Electrical safety

Describe the dangers of working on or near to live electrical circuits. Ensure good working practices are in place.

4. Temporary works

Describe the requirement to manage temporary works and ensure they are planned, maintained and removed appropriately.

5. Work equipment and hand-held tools

Describe the importance of control and management of work equipment on site. Ensure effective planning, risk assessment, training and maintenance are undertaken.

6. Mobile work equipment

Describe the effective planning and control of mobile work equipment. Describe the legal obligations of working with mobile work equipment on site.

7. Lifting operations and equipment

Describe the legal requirements for lifting operations, equipment and accessories and the steps required to ensure risks are mitigated, planning is undertaken (including selection of equipment) and the correct training and maintenance obligations are met safely and efficiently.

8. Mobile workforce and driver safety

Describe the legal framework and guidance that supports the management of health and safety for mobile, lone and out of hours workers, and the potential risks and how to control them.

Module 4 – High risk activities

1. Work at Height Regulations

Describe the risks surrounding working at height and the plans that must be in place to ensure safety.

2. Working at height

Describe the risks that exist from working at height, such as working platforms, scaffolds, ladders, flat and pitched roofs and anywhere near fragile materials, openings, holes and roof edges.

3. Common access equipment

Describe the health and safety requirements when selecting and using common forms of access equipment.

4. Scaffolding

Describe the key safety issues that relate to the use of scaffolds, how to manage scaffolding operations and how to assess suitability of erected scaffolds.

5. Fall arrest and suspension equipment

Describe the importance of fall arrest and suspension equipment.

6. Excavations

Describe the importance of planning excavations and a safe working practice considering all the elements of the excavation.

7. Underground and overhead services

Describe the risk factors of working with underground and overhead services, including how to plan the work and manage risk.

8. Confined spaces

Describe what a confined space is, how to risk assess it and how to work safely.

9. Assessment

Trainers may wish to start the course with the *What do you know?* question paper to establish delegate knowledge levels.

To successfully achieve the course, delegates must:

- Complete all four core exercises
- Pass the trainer review and
- Pass the end of course exam.

We suggest you share this information with the delegates at the beginning of the course.

9.1. Trainer review

The trainer review provides a pass/fail based on the delegate's performance and engagement in the core exercises and engagement in the course overall. Details of this are provided in XA6T.

The trainer review **must** be completed before the end of course assessment. If a learner is assessed as failing the trainer review, then they are not permitted to sit the end of course assessment.

9.2. Examination paper

The paper consists of 25 questions, selected by CITB, covering all aspects of the course. The exam must be taken at the end of the course.

Each exam paper has:

- 18 multiple choice questions (each worth one mark)
- 7 questions in multi-response or short written answer format (each worth two marks)

The two mark questions all relate to the seven health and safety focus areas. The higher marks recognise and reward the increased complexity of the question and response required.

The seven health and safety focus areas are founded on construction ill health, injury and fatality statistics:

- Working at height
- Vehicles/pedestrians
- Manual handling
- Asbestos
- Dust
- Noise
- Vibration.

The exam pass mark is 81% (26 out of 32).

The exam lasts for 35 minutes and must be completed within this time under exam conditions. Delegates are permitted to use the *Construction site safety – The comprehensive guide* (GE700) publication and the *Construction site management delegate workbook* (XA6) for the last 15 minutes of the exam.

The exam paper forms part of the overall assessment as to whether the delegate has successfully achieved the Site Management Safety Training Scheme and demonstrated both knowledge of the relevant statutory provisions as well as the application of management in respect of health and safety issues.

9.3. Re-sits

If a delegate has:

- completed the four core exercises, **and**
- passed the trainer's review, **and**
- gained between 72%–78% (23, 24 or 25 out of 32) in the exam,

then they may re-sit the examination one further time.

The re-sit may take place on the same day or by attending the final day of another course within a 90-day period (the delegate is not obliged to re-do the whole course). The re-sit may be conducted in either face-to-face or a remote setting.

The training provider must make the arrangements with the delegate and ensure that the dedicated re-sit exam paper is used.

A charge may be made to the delegate. However, this fee is left entirely to the discretion of the training provider. The training provider may also recover additional costs from the delegate, which should be agreed in advance.

Subsequent arrangements will be at the delegate's own expense.

If a delegate fails the re-sit, they must take the full SMSTS course again.

When a delegate scores less than 69% (22 correct answers out of 32) in the final exam, the delegate must attend the full SMSTS course again before they are permitted to re-sit the exam.

10. Trainer requirements

Please refer to the [Quality Assurance document](#) that sets out the trainer requirements.

Note: *the SMSTS certificate will be accepted for Health and safety awareness (HSA), Site supervision safety training scheme (SSSTS), and SSSTS and SMSTS refresher courses.*
